PEOPLES GAS®
ENERGY EFFICIENCY PROGRAM

NORTH SHORE GAS®
ENERGY EFFICIENCY PROGRAM

Energy Efficiency for Industrial Customers

The Peoples Gas and North Shore Gas Energy Efficiency Programs offer tailored solutions to help manufacturers and industrial facilities reduce energy costs and identify custom energy-saving opportunities. We have a number of ways you can save — with rebates, resources, expert support, and project management.

Start with an assessment

An energy advisor will walk through your facility to evaluate your equipment and energy use and identify savings opportunities. After the assessment, you will receive a customized report outlining recommended projects and the incentives available to help pay for them.

Get money for your upgrades

We have a variety of prescriptive rebates for improving the efficiency of your equipment, such as boiler tuneups, insulation, steam traps, space heating, and other service-based improvements.

For more specific improvements or deeper projects, we have custom rebates to help finance projects that may be more complex or unique to your facility.

Our team also provides and supports engineering studies that probe deeper into your facilities to find cost-saving opportunities.

Our team provides support and guidance every step of the way, to ensure you find the best energy efficiency upgrades for your facilities.

Find savings opportunities

Some of our top energy-saving improvements for commercial and industrial customers are:

- Pipe insulation
- Building automation systems
- Furnace/boiler repair and replacement
- Condensate return
- Combined heat and power
- Demand-controlled ventilation
- Steam trap survey and replacement
- High-efficiency boilers and furnaces
- Heat recovery
- High-efficiency rooftop units
- Boiler/stack economizers
- HVAC optimization

Make efficiency part of your success

We encourage you to make energy efficiency a part of your organization's larger sustainability and operational goals.

Community successes

Roquette America

Gurnee-based Roquette America, a global leader in plant-based ingredients for the food and pharmaceutical industries, has partnered with our Energy Efficiency Program for many years to improve the efficiency of its operations. Since completing a steam trap project that saved nearly 100,000 therms annually, Roquette has continued to invest in energy-saving upgrades, including process pipe insulation, boiler economizers, steam system improvements, and valve replacements. Engineering and insulation studies have also identified new opportunities for heat recovery and ongoing natural gas savings. Together, these projects have helped reduce energy use while creating a safer, more efficient, and more productive manufacturing environment.

South Chicago Packing

South Chicago Packing began its engagement with our Energy Efficiency Program with a burner retrofit project. Since then, its work has evolved to more complex energy-saving tactics, including custom projects and the ability to receive specific energy usage data to analyze and make informed decisions that maximize natural gas efficiency. It has continued to dig deeply to find more opportunities to save, most recently through a natural gas optimization study offered through the program. This study will provide insights to leverage for additional projects and supports new pathways to future energy savings.

Terms and conditions apply. Program is subject to change.
Actual savings will vary by customer's energy usage and rate.
This program is funded by Peoples Gas and North Shore Gas customers in compliance with state law.
